# DISTRICT REPORTS ON WEATHER AND CROPS.

#### For the week ending on the 22nd May 1929.

Summary.—During the week light to moderate rain fell in East and North Bengal, elsewhere it was light and scattered. More rain is needed in West Bengal for field operations. The growth of the standing crops was affected by the sudden rise of rivers in some low lands of East Bengal. The average price of common rice for the province has fallen by about 0.21 per cent. as compared with that of the previous week.

#### DISTRICT REPORTS ON WEATHER AND GROPS.

#### For the week ending on the 29th May 1929.

Summary.—During the week the rainfall was generally light and scattered. More rain is needed, specially in West Bengal, for field operations and for the growth of standing crops generally. Weeding of autumn crops is in brisk progress. The average price of common rice for the province has risen by about 0.96 per cent. as compared with that of the previous week.

N.B.—The two loans of 1917-18 for Rs. 22,54,200 and Rs. 8,12,100 were repaid during 1927-28 from their respective sinking funds and the reserve fund specially created for the purpose.

N. N. Bose,

Chief Accountant.

J. C. MUKERJEA, Chief Executive Officer.

The 29th May 1929.

NOTICE.

It is notified for general information that the Corporation of Calcutta under powers vested in them in this behalf under Act III (B.C.) of 1923 have, by a resolution dated the 24th April 1929, prescribed the alignment of the projected street widening Satchasipara Road in Ward 32 to a width of 40 feet and extending it in places as shown in the plan prepared in this behalf which may be seen in the office of the Surveyor and Valuer of the Corporation any day during office hours on payment of usual fees. of usual fees. J. C. MUKERJEA,

Chief Executive Officer.

#### RESOLUTION ON THE FINAL REPORT ON THE SURVEY AND SETTLEMENT OPERATIONS IN THE DISTRICT OF NADIA.

#### GOVERNMENT OF BENGAL.

Revenue Department.

Land Revenue.

DARJEELING, THE 29TH MAY 1929.

#### RESOLUTION-No. 429 T.R.

Read-

The Final Report on the Survey and Settlement Operations in the district of Nadia.

No. XXV-3-1081, dated the 28th November 1927, from the Director of Land Records, Bengal, submitting the report.

Letter No. 15-R.L., dated the 9th January 1929, from the Commissioner of the Presidency Division, submitting his remarks on the report.

Nadia is a small district and lies in the heart of the Province. It was at one time the headquarters of the old Hindu Kings of Bengal and to-day Nabadwip is still a centre of religious life as also of Sanskrit learning. It has been the scene of important historical events, the most considerable of which in modern times was the battle of Plassey. In the 19th century

the district was covered with flourishing indigo factories.

2. The survey and settlement operations of the district were taken up earlier than had been originally intended mainly with a view to devise a solution of the difficulties which had arisen from the system of land tenure known as Utbandi which affects a large proportion of the area of the district. This system had its origin originally perhaps in the poverty of the soil and was stimulated by the cultivation of indigo. Where *Utbandi* prevails holdings consist of parcels of land, the area, location and rent of which are ascertained and recorded annually. The principal disability under which the tenants of these holdings suffered was the high rate of rent charged for every conceivable kind of crop. A solution has been found and embodied in the Bengal Tenancy Act as section 180A, which became law in 1923. Both tenants and landlords are taking advantage of the new provisions of the Act and a respectable percentage of the total area recorded as real Utbandi has since been converted into ordinary occupancy holdings. It is hoped that within a reasonable time the *Utbandi* system will have almost disappeared from Nadia.

The area of the district is 2,898 square miles of which 70 per cent. of the land is cultivated, 11 per cent. is entirely unculturable and the remaining 19 per cent. is culturable but not cultivated. The reason for this high figure of 19 per cent, is that though the soil is scarcely anywhere sterile it is not generally fertile and much land lies on the margin where an economic

return is doubtful.

The total population of the district is 1,487,572 as recorded in the census of 1921 of which 60 per cent. are Muhammadans, 39 per cent. Hindus and nearly 1 per cent. Christians. 68:6 per cent. of the population derives

its livelihood from agriculture and Nadia is more self-contained in respect of the production of all the necessaries of life than most other districts in Bengal.

5. The conditions of agriculture in the district are susceptible of much improvement. This is due to the low standard of cultivation, the poverty of the soil and the apathy or, more bluntly, the laziness of the people. The health of the district is notoriously bad and it has suffered severely from malaria.

6. The total area surveyed by the Nadia Settlement Party was The area of nominal Utbandi lands was 73,914 acres and 1,646,244 acres. of real Utbandi 252,173 acres. The incidence of raiyati rent is Rs. 2-7-3 per acre, which is almost the same as in Jessore, where it is Rs. 2-7-5, and a little less than in Faridpur, where it is Rs. 2-10-6.

7. The total number of estates on the touzi roll of the district is 2,603 and the land revenue is Rs. 9,85,294. The gross rental of raiyats and under-raiyats is estimated to amount to about Rs. 45 lakhs.

The Governor in Council observes with regret that many abwabs are exacted from the tenants throughout the district, even where the Utbandi

system does not prevail.

8. Traverse survey began in 1917-18. The first field season, however, coincided with the influenza visitation which was seriously felt in Nadia and this retarded progress. The operations were completed by the end of the year 1925-26. The total cost of the operations was estimated at Rs. 22,73,101, but the actual expenditure was Rs. 23,09,656, an excess of 2 per cent. The excess is fully accounted for by the general rise in prices which has taken place since the estimate was prepared in 1916. The Settlement Officer is to be congratulated on avoiding a larger excess.

Recovery of costs was satisfactory.

9. The Governor in Council desires to place on record his appreciation of the services of Mr. J. M. Pringle, i.c.s., for the able manner in which he tackled the intricate and difficult questions involved in the Utbandi system of land tenure. His thanks are also due to Mr. Kemm for his share in the final report and especially for his valuable review of the whole Utbandi question which formed the basis of the subsequent legislation. It is gratifying to observe that this settlement not merely recorded things as it found them but left them better than they were. The experience gained during the settlement operations enabled Government to devise a partial solution of the problems arising out of the peculiar system of land tenure of the district in the shape of the Utbandi Act, which appears to be gradually dissolving the abnormalities of the system.

By order of the Governor in Council,

H. J. TWYNAM,

Secretary to the Government of Bengal (offg.).

RESOLUTION ON THE REPORT OF THE DIRECTOR OF PUBLIC HEALTH, THE SANITARY BOARD AND THE CHIEF ENGINEER, PUBLIC HEALTH DEPARTMENT, FOR THE YEAR 1927. .

#### GOVERNMENT OF BENGAL.

Local Self-Government Department.

Public Health.

DARJEELING, THE 27TH MAY 1929.

RESOLUTION-No. 87 T.-P. H.

READ-

The report of the Director of Public Health, the Sanitary Board and the Chief Engineer, Public Health Department, for the year 1927.

READ ALSO-

The annual report on Vaccination in Bengal with the Statistical returns for the year 1927-28.

1. Public Health.—(Statistical, Epidemiological and General Public Health Administration).

Population.—For the purpose of this review the total population of Bengal, excluding the Chittagong Hill Tracts, is taken as 46,522,293 (1921 Census).

- 2. Birth-rate and death-rate.—The central feature in the report on public health for the year 1927 is that, notwithstanding higher mortality than usual from cholera and small-pox, the population of Bengal continued to increase, though naturally not quite to the same extent as in the previous year. The total number of births recorded rose from 1,276,380 in the preceding year to 1,286,863 and that of deaths from 1,151,197 to 1,189,370. The provincial birth-rate in 1927 was 27.7 per thousand as against 27.4 per thousand in 1926, showing an increase of 1.1 per cent. over that of the previous year and a decrease of 3.8 per cent. on the quinquennial average of 28.8 per thousand. The provincial death-rate in 1927 was 25.6 per thousand against 24.7 per thousand in 1926 with an increase of 3.6 per cent. over that year and of 1.6 per cent. over the average for the quinquennium. These figures and percentages must of course in the still somewhat primitive state of vital statistics in rural areas be taken rather as a relative index than a complete and accurate record. The Director of Public Health remarks—
  - "Allowing for a probable omission of 27 per cent. in the registration of births and deaths, the actual birth and death rates of the province may be assumed to be 35.17 and 32.51 respectively."

A beginning was made during the year 1927 with the transfer of the responsibility for collecting vital statistics to Union Boards, a function for which provision is made in the Village Self-Government Act, but which they have been on the whole somewhat reluctant to assume. The effect of the new system on the accuracy of the returns will need careful observation by the public health authorities.

Infant mortality.—In 1927, 229,078 infants died under the age of one year, as compared with 251,184 during the previous year, the decrease in the reported rate of infantile mortality being 9.6 per cent.

Extremely interesting results have been obtained in Calcutta and Dacca by special attention to midwifery and the care of infant life. In Calcutta there were five units at work staffed by 5 Lady Health Visitors and 18 midwives. In 4,748 cases attended by them the death-rate during the first ten days of infancy was only 35;5 per thousand as against the average for the city of 104.8 per thousand, while only 13 cases proved fatal to the parent. Two maternity centres working in the town of Dacca, and dealing with slightly over a thousand cases reported mortality during the first ten days of infancy of only 22 per thousand as against recorded mortality of 96 per thousand in the rest of the town. These figures go to show what can be accomplished by the proper care of mothers and infants.

During the year under review grants-in-aid were made to various local bodies for starting 100 classes of 10 dais each. In all 1,170 dais received training in 104 classes started by 49 local bodies and one health society. Public interest in maternity work and infant welfare was maintained and 67 health exhibitions and Baby Week functions were held during the year.

Cholera.—The mortality from cholera was 118,377 in 1927 as compared with 59,106 in 1926, showing an increase of 92·3 per cent. above that year and also above the decennial average. The measures taken to cope with epidemics included inoculation, disinfection of water-supplies, disinfection of infected houses and of the patients' clothes and supply of bleaching powder. Twenty medical officers and a temporary epidemic staff of 20 Sub-Assistant Surgeons and 100 Sanitary Inspectors were deputed to help local bodies in suppressing outbreaks. The publicity work carried on by the Publicity Branch of the Public Health Department by means of lectures and magic lantern demonstrations and free distribution of posters and leaflets on the prevention of cholera has gone far to show the public how far cholera may be regarded as a preventable disease. Local bodies concerned kept special watch over pilgrims for the Puri Rathjatra and the Ganga Sagar Mela with a view to detecting suspected cases.

Ganga Sagar Mela with a view to detecting suspected cases.

The cholera epidemic of the year 1927 gave the first impetus to the mass vaccination for cholera which made such remarkable strides. In 1927 1,299,630 cubic centimetres of cholera vaccine were issued as against 256,000 in 1926, while the number of inoculations reported jumped to 781,872 from

57,395 in the previous year.

Small-pox.—The mortality from small-pox was also distinctly above the average, 42,514 deaths being reported as against 25,548 in the previous year. The epidemic was attended with an increase of over 20 per cent, in activity in vaccination and nearly four million adults and children were vaccinated during the year. More than half of the precise total of 3,975,837 were revaccinations, but the number of primary vaccinations 1,928,674 was well above the total number of births reported. Protection is obviously increasing so long as more persons are vaccinated for the first time than are born in the year, but the actual percentage of successful vaccinations among the infants of 1927 was only 26.1 and slightly less than that of 1926.

Fever.—The high proportion of deaths attributed every year to the non-descript head of "Fever" is a natural consequence of the unscientific agencies on which the province relies at present for the greater part of its vital statistics. The actual figures reported under this head were 789,006, approximately two-thirds of the total mortality of the year, as against 822,774 in 1926.

Kala-azar.—The kala-azar statistics show curious results. With the exception of a peak in 1925 the number of cases treated at dispensaries and centres has risen continuously from 139,085 in 1924 to 180,074 in 1927, whereas the deaths reported in the latter year were only 11,855 as against 14,275 in 1926. There certainly seem grounds for hope that the increase in treatments along with the decrease in mortality may imply that the scientific and organised counter measures of recent years are making headway against the scourge. Certainly, if over-confidence would be premature, expenditure under this head has not been wasted.

Rural public health organisation.—The year 1927 witnessed the beginning on a small scale of a movement which may have far-reaching effects in remodelling public health organisation in the districts in future years. This is the system of founding public health circles corresponding in area to a thana, to each of which is attached an officer specially trained in public health work. Towards the cost of such centres Government contribute the actual expenses up to Rs. 2,000 for each unit per annum. With the assistance of Public Health Committees for the thanas it is not difficult to foresee how such centres may on the one hand facilitate the decentralisation of public health work from District Board headquarters and on the other hand link up the efforts of individual Union Boards for the improvement of public health in the thana as a whole. Among other advantages they should ultimately afford a medium for the better control and inspection of vaccination. These new public health circles were first brought into existence in August 1927 and 258 had been established by the end of March 1928.

Public Health Department, Engineering Branch.—In time of financial stringency lump grants for expenditure in the province as a whole are more easily justified than specific provision for works of sanitary engineering for the benefit of one town or another, and for this reason the public health engineer feels the pinch more acutely than the medical and scientific branch of the public health establishment. There were actually in progress, however, in 1927 under the Chief Engineer ten schemes of water-supply and drainage in various stages, while eight other schemes were completed during the year; and the work of preparing further schemes for provision in later years went on so far as there was any practical possibility of their realisation.

Dr. C. A. Bentley who had recently returned from leave to resume his old post was Director of Public Health, and Mr. F. C. Griffin took charge early in the year as Chief Engineer of the Public Health Department. Government appreciate in the former officer the enthusiasm and experience which have so long marked his tenure of office and in the latter the technical enterprise and departmental efficiency which he brings to his new charge.

By order of the Governor in Council,

C. W. GURNER,

Secretary to the Government of Bengal (offg.)

J. C. Rox, for Director of Agriculture, Bengal.

#### DEPARTMENT OF AGRICULTURE, BENGAL.

#### Monthly Weather and Crop Report of Bengal for May 1929.

- I. Character of the season.—During the month under review the rainfall was slightly in excess of the normal in four districts, elsewhere it was much in defect. The usual rainfall statement is appended.
- II. Progress of agricultural operations.—Field operations for Winter Paddy commenced in West and North Bengal. Sowings of the autumn paddy and jute were finished in East and parts of North Bengal, while elsewhere the operations were proceeding; the progress was, on the whole, fair. Weeding of autumn crops was going on briskly in East and parts of North Bengal.
  - III. State of standing crops.—On the whole the standing crops were greatly benefited by the rainfall of the month, although more rain was needed in the Western Circle.
  - IV. Prospects and probable outturn.—The outlook of standing crops including deep-water paddy was generally reported to be promising.
  - V. Damage to standing crops.—Damage from excessive rain in Mymensingh and Rangpur districts was reported and by sudden rise of water in the low lands of the districts of Dacca, Tippera and Noakhali.
  - VI. Condition of agricultural stock.—The condition of livestock was generally fair. Sporadic cases of cattle-disease were, however, reported from seven districts.
  - VII. Failure of pasturage and fodder.—No insufficiency of fodder was reported from any part of the province.
  - VIII. Prices of food-grains.—During the second fortnight of the month the retail price of common rice of the cheapest quality rose in eight districts, fell in six and remained stationary in the rest of the Presidency. It varied from  $5\frac{3}{4}$  seers in 24-Parganas to 9 seers in Khulna and Chittagong.
- IX. Condition of agricultural population.—The condition of agricultural population was, on the whole, fair.

F. SMITH,

for Director of Agriculture, Bengal (offg.).

DACCA, the 7th June 1929.

#### DISTRICT REPORTS ON WEATHER AND CROPS.

## For the week ending on the 5th June 1929.

Summary.—During the week the rainfall was heavy in parts of East Bengal, elsewhere it was light moderate. It has facilitated field operations for winter paddy and benefited the standing crops generally. Weeding of autumn crops is proceeding. The average price of common rice for the province has risen by bout 0.44 per cent. as compared with that of the previous week.

#### RESOLUTION ON THE REPORT ON THE WORKING OF THE ASANSOL MINES BOARD OF HEALTH FOR THE YEAR 1927-28.

### COVERNMENT OF BENCAL. Local Self-Covernment Department. Public Health.

DARJEELING, THE 6TH JUNE 1929.

RESOLUTION-No. 117T. -P.H.

READ-

The Report on the working of the Asansol Mines Board of Health for the year 1927-28.

The constitution and personnel of the Board remained unchanged during the year under review. Thirteen ordinary and six special meetings were held during the year.

One ordinary meeting failed for want of a quorum.

2. The total income of the Board including an opening balance of Rs. 1,05,628 amounted to Rs. 2,32,561 during the year, of which Rs. 1,00,793 was collected from mine-owners and Rs. 19,696 from receivers of royalties, against Rs. 1,10,342 and 20,508, respectively, in the previous year. The decrease was due to the reduction of the rate of cess from Rs. 2-8 to Rs. 2 per 100 tons of coal raised. Miscellaneous receipts rose from Rs. 2,032 to Rs. 2,665. The total expenditure amounted to Rs. 1,70,881, leaving a closing balance of Rs. 61,680. Under the instructions of the Commissioner reductions were made in the recurring charges by reducing the numerical strength of the the recurring charges by reducing the numerical strength of the establishment, and this has enabled the rate of cess on mine-owners to be further reduced to Re. 1-14 during the current year. In view, however, of the closing down of a large number of mines and consequent reduction in the raisings, the Commissioner of the Burdwen Division

however, of the closing down of a large number of mines and consequent reduction in the raisings, the Commissioner of the Burdwan Division has pointed out that it may be necessary to restore the rate to at least Rs. 2 if the Board's efficiency is not to be seriously impaired. Government await the decision of the Commissioner on this question.

3. The total number of cases of small-pox recorded during the year was 361 with 51 deaths, against 1,374 cases with 162 deaths during the previous year. The number of primary and secondary vaccinations performed during the year was 13,142 and 16,026, respectively, as against 16,736 and 46,096 during the previous year. The reduction in the number of re-vaccinations was due to the fact that small-pox was not epidemic in the Mining settlement during the year under review.

4. There was no serious outbreak of any epidemic disease during the year, which was generally a healthy one. According to the Report the settlement was practically free from malaria, the number of cases and deaths from this disease being much below the average. In this connection the District Magistrate of Burdwan, however, remarks as

"Only three deaths are reported as due to malaria: this seems to go counter to the popular opinion of the incidence of this disease, which I am told is very severe near Raniganj. Perhaps the others died of "unrecognised malaria." There was one case of plague imported from the district of Azamgarh in the United Provinces. There was no case of influenza or epidemic dropsy throughout the year; mortality from cholera showed a considerable decrease, there being 295 seizures with 125 deaths, against 815 cases with 462 deaths during the previous year. It is satisfactory to note that the spread of the disease was prevented by various routine measures of disinfection carried out by the Board's staff and by the regular administration of essential oils, cholera prophylactic to all house contacts. As regards the protective measures against cholera the Magistrate of Burdwan observes as follows:— "Only three deaths are reported as due to malaria: this seems to follows :-

"I consider the statements about the inaccurate reporting of the death-rate from cholera outside the Mines Board of Health area exaggerated, if not untrue. Certainly the statements about the suppression of epidemic cholera have been belied by the experience of the recent cholera epidemic in this district, when not only was the reporting through the police and chaukidars fairly efficient, but the public was alive to the danger and letters and post-cards came in large numbers

of all officers from the subdivisional officers to the Commissioner and the Director of Public Health. There was no chance of the deaths from cholera being lumped together as being due to fever."

The Board has probably confused the weekly epidemic reports of cases and deaths, which are admittedly incomplete, with the monthly returns of mortality which are obtained in quite a different manner and are believed to be substantially accurate.

The Government of Bengal hope that such loose and misleading statements will not be repeated.

5. The birth-rate decreased from 26·16 per mille to 24·76, while the death-rate also decreased from 18·48 to 17·14. The total number of births recorded during the year was 8,156 against 8,733 in 1926-27; while the number of recorded deaths fell from 6,086 to 5,646.

6. The infantile mortality remained stationary. It is satisfactory to note that as in previous years and a simple stationary.

to note that, as in previous years, not a single maternal death occurred amongst several hundred deliveries attended by the Board's midwives.

amongst several hundred deliveries attended by the Board's midwives.

7. The Board continued to pay attention to such special measures as anti-malarial investigation, improvement of rural water-supply, medical inspection of school children, delivery of weekly lectures by the sanitary assistants in primary schools on hygiene and public health, and training of village dais (midwives) by the Board's midwives. The midwives of the Board, in addition to their specific duties, also paid house-to-house visits and delivered simple lectures on the general principles of cleanliness and domestic hygiene to the women of the principles of cleanliness and domestic hygiene to the women of the settlement. The District Magistrate reports that the medical inspection of school children had become perfunctory, so new rules have been drawn up to ensure that this part of the Board's work will be done

arawn up to ensure that this part of the Board's work will be done properly in future.

8. The sanitary administration of the settlement area maintained the same degree of efficiency as in the preceding year. In this connection the Commissioner remarks as follows:—

"I am not sure that all is being got from the subordinate staff that we could reasonably expect, or to put it another way, whether the same efficiency might not be maintained at a less cost with a smaller staff."

In addition to the criticisms contained in the body of this Resolution

In addition to the criticisms contained in the body of this Resolution the Government of Bengal feel constrained to remark that the statistical portion of the Report would be of more value, if it were possible to compare statistically the incidence of diseases in the collieries, villages compare statistically the incidence of diseases in the collieries, villages and municipalities of the Mining settlement; this cannot be done at present in the absence of figures of the population of each colliery and village. It is not understood why the Board should find it impossible to obtain these figures. Statistics of the population of tea gardens in the Jalpaiguri Duars are readily obtained, although there is no special staff or organisation there such as exists in the Mining settlement, and are found to be of the utmost use for public health purposes. health purposes.

Apart from the facts mentioned and certain other points to which attention has already been drawn by the District Magistrate the fact remains that ever since the first establishment of the Mines Board of Health and the employment of an organised sanitary staff very great progress has been made in regard to public health matters, and the position of affairs in this respect is now infinitely more satisfactory than it was formerly, when epidemics of cholera and small-pox used to ravage the mining areas unchecked, causing great loss of life and much general disorganisation of the industry. And although much yet remains to be done to improve the hygienic condition of the people, it may safely be stated that a sound foundation of public health administration has been securely established in the Mining settlement

by which future progress is now assured.

As Dr. J. W. Tomb, o.B.E., who has been Chief Sanitary Officer since February 1916 is now severing his connection with the Board, Government take this opportunity of bearing witness to the high quality of his work to which in very large measure the success achieved by the Board is due. His activities were, to begin with, those of a pioneer who had great difficulties to face and prejudices to overcome; and have all long been those of a keen and able administrator and an expert sanitarian.

and an expert sanitarian.

By order of the Government of Bengal.

C. W. GURNER.

Secretary to the Government of Bengal (offg.).

# RESOLUTION ON THE REPORT ON THE ADMINISTRATION OF THE JAIL DEPARTMENT IN THE PRESIDENCY OF BENCAL FOR THE YEAR 1928.

### GOVERNMENT OF BENGAL.

Political Department.

Jails.

CALCUTTA, THE 4TH JUNE 1929.

#### RESOLUTION-No. 1920 P.J.

READ-

The report on the administration of the Jail Department in the Presidency of Bengal for the year 1928.

READ ALSO-

The reports for the years 1926 and 1927 and the resolutions of Government thereon.

- 1. The average daily population in the jails of Bengal was 14,005 in 1928 against 13,536 in 1927 and 12,771 in 1926. Out of the population of 14,005, 11,021 were male convicts and 106 female convicts. The number had slightly fallen by the end of the year.
- 2. For the past ten years there has been a steady improvement in the health of prisoners. The average daily number of sick per thousand of the jail population, which for the years 1919-23 was over 40, fell to 29.7 in 1928—the lowest on record. The death rate was 13.5 per mille, which is the lowest figure on record except that of 1925 when the rate was 13.0. The improvement is mainly attributable to the decrease in the number of malarial and dysentery cases: the latter disease, which in former years was a serious menace, has been subdued by improvements in the water supply and more effective sanitary measures. Cases of tuberculosis were in 1928, as in the previous year, higher in number, though there were fewer deaths.
- 3. The total cost of guarding and maintaining prisoners rose from Rs. 25,09,958 to Rs. 25,55,477. The greater part of the increase is due to an increase in the cost of feeding prisoners.
- 4. The average period of detention of prisoners awaiting trial is less satisfactory than last year. In sessions cases it has risen from 42:17 to 45:38 days, and in magistrate's cases from 19:86 to 21:48 days. In Krishnagar, Burdwan and Dacca, the average period for sessions cases was over 10 weeks, and in Rajshahi it was as much as 100 days. The attention of the Judicial Department will again be drawn to these delays.
- 5. The total earnings of the manufacturing departments of the jails amounted to Rs. 4,17,555. While this represents a satisfactory increase of Rs. 41,000 over the earnings of 1927, it still falls below that of previous years. Considerable difficulty has been experienced in obtaining sufficient customers for jail products. An enquiry will be made into the complaint of the Inspector-General that some departments fail to observe the principle accepted by Government that orders should be placed with jails when suitable articles can be purchased from them at rates not higher than those obtainable in the open market.
- 6. Among the reforms in jail administration recommended by the Indian and Bengal Jails Committees, prominence was given to the necessity of a well disciplined and contented warder staff. The Governor in Council shares the satisfaction of the Inspector-General of Prisons that the Legislative Council recognised this necessity and voted the grant required for an increase in the rates of pay. Whilst recognising that there is still

need for better housing of warders and other changes in the conditions of service, His Excellency in Council trusts that the substantial improvement in pay which has now been granted will go far towards securing a contented

and disciplined force.

7. The Inspector-General of Prisons reports that the inmates of the recently founded Borstal Institution showed satisfactory progress in discipline and education. The institution has received valuable help from the After-care Association; and the Governor in Council desires to place on record his appreciation of the services of non-officials who have interested themselves in its work.

8. It is satisfactory to note that the number of juvenile prisoners below the age of 16 confined in jail has greatly decreased. During 1928 the number admitted after conviction was 75 against an average of 230 for the previous three years. This decrease is attributable largely to the operation of the Bengal Children Act, 1922, and to the exercise of more discretion by magistrates in the districts in which that Act is not in force.

9. Apart from the concentration of weak-minded prisoners at Berhampore, no further progress has been possible in the more effective separation of different classes of prisoners. His Excellency in Council, however, notes with pleasure the continued success of the experiment in the education of young prisoners at Alipore and hopes that the extension of it to other jails

will not be long deferred.

- 10. The policy of putting into effect the recommendations of the Jails Committees can only be carried out gradually as the provision of funds becomes possible. The large expense involved delays the introduction of many schemes which have been recognised as desirable. They include the provision of whole-time Superintendents in selected district jails, an increase in the clerical staff, the extension of primary education to all the larger central jails, as well as the segregation of habitual and non-habitual prisoners in separate jails and the provision of separate accommodation for juvenile and adolescent prisoners who are not sent to the Reformatory or Borstal school.
- 11. The number of punishments imposed on prisoners was less than that of last year, although the total number of prisoners was greater. There were only five cases of whipping. The number of punishments inflicted on the warder staff also showed a reduction which the Inspector-General attributes to the improvement of their morale owing to the better pay and prospects of the service.

The report for 1928 will be the last submitted by Lieutenant-Colonel Hamilton who has been Inspector-General since the year 1924. The Governor in Council desires to place on record his appreciation of Lieutenant-Colonel Hamilton's services and of his enthusiasm in working not only for the important reforms which have been carried out during his period of administration but also for others which for financial reasons still remain to be carried into effect. He also desires to acknowledge the good work done by the officers specially mentioned in Lieutenant-Colonel Hamilton's interesting report.

Ordered that a copy of this resolution be forwarded to the Inspector-General of Prisons, Bengal, for information and guidance.

Ordered that a copy of this resolution and a copy of the report be submitted to the Government of India in the Home Department.

Ordered also that the resolution be published in the Calcutta Gazette.

By order of the Governor in Council,

W. S. HOPKYNS,

Chief Secretary to the Government of Bengal (offg.).

## RESOLUTION ON THE REPORT ON THE WORKING OF CO-OPERATIVE SOCIETIES IN BENGAL FOR THE YEAR ENDING 30TH JUNE 1928.

### GOVERNMENT OF BENGAL

Agriculture and Industries Department. Co-operative Societies.

DARJEELING, THE 7TH JUNE 1929.

## RESOLUTION—No. 323 T.—A.I.

READ-

The Report on the working of Co-operative Societies in Bengal for the year ending 30th June 1928.

Administration.—Rai J. M. Mitra Bahadur held the office of Registrar throughout the year. There was no change in the strength of the superior controlling staff. Khan Bahadur A. K. Kabiruddin Ahmed, Assistant Registrar, Rajshahi Division, reverted to the general line as Deputy Collector, his place being taken by Babu Sukumar Chatterji, M.B.E., Deputy Collector.

As observed in last year's resolution 4 Inspectors and 12 auditors were appointed during the year. Government have since approved the creation of 48 additional posts of auditors, and provision for 2 new Inspectors and 14 new auditors has been made during the current year. When the full staff of auditors is appointed the difficulty now experienced in completing

the audit of societies will be removed.

2. Economic conditions were on the whole not unfavourable though insufficiency of rainfall in the earlier part of the year followed by a deficiency in the later rain in October 1927 materially affected the outturn of winter paddy throughout the province. The market was unfavourable for jute. paddy throughout the province. The market was unfavourable for jute. The number of societies continues to show a satisfactory increase. The total rose from 15,439 to 18,107, an increase of 17·2 per cent. as compared with an increase of 20·4 per cent. in the preceding year. Membership rose from 547,325 to 635,959, an increase of 16·1 per cent. as compared with 20·7 per cent. in the previous year. Working capital rose from Rs. 9,43,42,218 to Rs. 11,10,01,532, an increase of 17·6 per cent. as compared with 25·3 per cent. in 1926-27. The cash employed in the movement during the year was Rs. 6·16 crores against Rs. 5·15 crores in the previous year.

3. In the marketing of agricultural produce, the most remarkable event was the development of the Central Paddy Sale Depot at Ultadingi in Calcutta into a Central Paddy Sale Society organised on a co-operative basis Calcutta into a Central Paddy Sale Society organised on a co-operative basis and registered under the Act. It worked well during the year and opened a branch at Chetla to assist in the disposal of stock on behalf of the sale societies in the Burdwan Division. The Gosava Paddy Sale Society continued to flourish. The societies engaged in the marketing of jute are reported to have maintained their reputation for standard in assortment and were able to keep in touch with the market through the wholesale society

4. There was further progress in the working of the Provincial Bank. Its membership increased from 149 to 159, the working capital from Rs. 118,24 lakhs to Rs. 135,05 lakhs and the share capital from Rs. 10,50 lakhs to Rs. 12,27 lakhs. The increase in deposits from non-members from lakhs to Rs. 12,27 lakhs. Rs. 88,30 lakhs to Rs. 102,93 lakhs is a sure indication of public confidence in its financial soundness. During the year under report the Bank opened

a Savings Bank Department and introduced Home Safe Boxes. In spite of the increase in deposits and in its working capital the Bank at times experienced some difficulty in meeting the demand for loans. But it was able to deal with the situation by raising short-term deposits for the purpose

of financing short-term loans.

5. The number of agricultural credit societies, including grain banks, increased from 13,398 to 15,689. The proportion of credit societies to the total number of societies fell from 86.6 in the last year to 81.1 in the year under review. The total number of members increased from 329,765 to 382,152 and the total working capital from Rs. 3,20,83,931 to Rs. 3,77,83,860. The credit societies are still mainly dependent on the Central and Provincial Banks for their finance and derive from this source as much as 73.1 per cent. of their working capital. There was an increase in the total amount of collection from Rs. 79,93 lakhs in 1926-27 to Rs. 93,49 lakhs during this year, but the percentage of this collection on the total amount due at the beginning of the year fell from 37.8 to 35.3 with the result that the overdues rose from Rs. 67,45 lakhs to Rs. 92,12 lakhs. This is attributed to the fact that agricultural conditions were not favourable over the province as a whole and to the low price of jute on which many cultivators depend for ready money. The audit classification of societies shows practically no improvement over the previous year.

6. As observed in last year's resolution, the successful working of the Calcutta Milk Union has led to the formation of similar unions at Darjeeling and Dacca and to the organisation of a large number of village milk societies. The scope for such societies is very large and there is an equally great demand for pure milk in most of the towns of Bengal. A temporary post of Superintendent of Milk Societies has therefore been created since the close of the year and there is every reason to hope that the milk supply in urban areas will now be organised on a co-operative basis to the benefit

alike of producers and consumers.

7. The Bengal Co-operative Silk Union, which was established during the previous year, has made an excellent beginning. It embraces in the scope of its operations all stages of the silk industry from the rearing of cocoons to the marketing of the finished products. It is proposed to finance the Union with a loan of Rs. 50,000 for distribution among its members and necessary provision of funds has been made during the current year.

- 8. The number of co-operative agricultural associations has remained practically the same, being 31 against 30 in the previous year. The main object of such societies is to meet a demand for improved seeds and agricultural implements. The general policy underlying the formation of agricultural associations is that, where in a compact group there is definite demand for pure seeds, new manures and improved appliances, there is scope for the successful working of a co-operative agricultural association. Where the demand is limited to one or two varieties of seed it is thought best not to attempt to form an agricultural association but to arrange for the distribution work through credit societies and central banks. Where assistance is required in the multiplication as well as in the distribution of improved seed, it is best to start co-operative seed farms either attached to credit societies or as separate institutions. The proposal to start a co-operative colonisation society at Cox's Bazar is now engaging the attention of the revenue authorities.
- 9. The irrigation movement was, as in the previous year, mainly confined to Western Bengal. The total number of irrigation societies increased from 377 with a membership of 13,328 to 525 with a membership of 15,195.
- 10. The membership of the Naogaon Ganja Cultivators' Co-operative Society, Limited, rose from 3,747 to 3,770. There was a slight decrease in the share capital from Rs. 44,940 to Rs. 44,300, while the working capital decreased from Rs. 7,29,965 to Rs. 6,86,514. The society sold 4,450 maunds of ganja as against 4,469 maunds in the previous year. The charges paid to the Government for the maintenance of the excise preventing staff

increased from Rs. 28,122 to Rs. 34,793, while the amount spent on the construction and lighting of the chattars rose from Rs. 15,528 to Rs. 21,161. As in the previous year the ganja cultivators obtained a fair price for their produce and out of its profits the society maintained three charitable dispensaries and one veterinary dispensary in the ganja mahal at a cost of over Rs. 2,000. It spent over Rs. 12,000 in education by subsidising three high English schools and 45 primary schools. A sum of Rs. 3,783 was spent on the improvement of roads and bridges and Rs. 4,925 were given as donations for various charitable purposes at Naogaon and elsewhere.

The number of non-agricultural credit societies increased from 11. 333 to 358. With the exception of 18, they were organised on the basis of limited liability. The total number of members rose from 105,921 to 119,918, the total share capital increased from Rs. 40,54 lakhs to Rs. 46,20 lakhs and the reserve fund from Rs. 9,05 lakhs to Rs. 10,91 lakhs. The total profits earned by these societies increased from Rs. 5,10 lakhs to Rs. 6,81 lakhs but the dividends payable to shareholders were not allowed to exceed 12½ per cent. in any case. The deposits from members fell from Rs. 54,10 lakhs to Rs. 48,94 lakhs, which was off-set by a rise in the deposits from non-members from Rs. 55,02 lakhs to Rs. 80,85 lakhs. Loans from Provincial or Central Banks amounted to Rs. 4,32 lakhs only and it is satisfactory to note that these societies have in most cases been able to gain public confidence and to attract a sufficient amount of local capital. In fact there are many cases where these urban banks had to refuse

deposits.

12. The Bengal Co-operative Organisation Society continued to play an important part in the movement. In addition to the publication of two journals devoted to co-operative subjects, the society carried on propaganda with the help of lectures. The society took charge of the co-operative section of the Eastern Bengal Railway demonstration train which was of great interest to rural people and drew large crowds at every station visited. It also undertook the training of Central Bank and departmental staff and of

apprentices for jute sale societies.

13. As the Bengal Home Industries Association, which had for many years been in receipt of aid from Government had failed to achieve the pur pose it had set before it, i.e., the promotion and development of home and cottage industries and above all the vital service of finding for them a market, Government decided to subsidise with a capital grant of Rs. 3.000 for furniture and equipment and an annual recurring grant of Rs. 12,000 for three years a new Central Sale Depot which will work under the direction of the Bengal Co-operative Organisation Society and the purpose of which will be to find a market for the products of all cottage industries and not only for those which are organised co-operatively. The depot has just been started and is being conducted on business lines. If it fails to become self-supporting, it is not intended to renew this subsidy at the end of the present term. Since the close of the year it has also been decided to grant present term. Since the close of the year it has also been decided to grant a loan of Rs. 50,000 to the depot at an interest of  $7\frac{1}{2}$  per cent. per annum on the security of the goods at the depot for advancing to cottage workers a reasonable proportion of the price of the finished articles immediately they are delivered at the depot. It is hoped that this will go a great way towards encouraging cottage artisans in the province by providing a ready market for their goods and thereby lead to an improvement in the quality and quantity of their products.

14. The number of Central Banks in the province rose from 103 to The total number of affiliated societies increased from 13,235 to 15,568, that is, by 176 per cent. and the total working capital rose from Rs. 303,22 lakhs to Rs. 350,63 lakhs, or by 156 per cent. Deposits from individuals increased from Rs. 170,06 lakhs to Rs. 195,03 lakhs and represented 556 per cent. as against 5608 per cent. in the previous year. The total paid-up share capital increased from Rs. 35,63 lakhs to Rs. 41,09 lakhs and the reserve and other funds from Rs. 15,51 lakhs to Rs. 18,78 lakhs, but the total of these amounts represented only 178 per cent. of the total working capital as against 168 per cent. of the previous year. The total amount borrowed from the Bengal Provincial Co-operative Bank rose from Rs. 77,44 lakhs to Rs. 91,82 lakhs. Loans advanced by the Central Banks to affiliated societies declined from Rs. 202,73 lakhs to Rs. 177,44 lakhs, while repayments from affiliated societies fell from Rs. 153,28 lakhs to Rs. 134,61 lakhs. The percentage of repayments to the total loans outstanding in the beginning of the year fell from 716 to 50.5. This decrease in collections is accounted for by unfavourable agricultural conditions and the low price of jute. The total profits earned by the Central Banks rose from Rs. 6,10 lakhs to Rs. 8,24 lakhs and the cost of management increased from Rs. 3,98 lakhs to Rs. 4,82 lakhs (or 13 per cent. of the working capital as in the preceding year). There was a marked improvement in the relation between the Central Banks and the constituent societies. No case was reported of strained relationship between village societies and the central federations.

15. The number of village reconstruction and anti-malarial and health

15. The number of village reconstruction and anti-malarial and health societies rose from 450 in 1926-27 to 557 in the present year. Membership increased from 10,524 to 13,666. The public health and rural reconstruction societies organised under the auspices of the Visva Bharati of Dr. Rabindra Nath Tagore are reported to have done good work.

Of the six existing Mahila Samities the society at Bankura did not work and has applied for cancellation of registration. The Nimta Society continued to progress and its membership increased. Most of its members continued to progress and its membership increased. Most of its members joined the Dhai training class and obtained certificates of competency. They also received some training in sewing and needlework from a lady teacher deputed by the Saroj Nalini Memorial Association. The Barasat Society found employment for some of its members by turning out khaddar and by tailoring work. The Tala Society is doing very useful work.

16. The number of relief societies rose from 10 to 17 with an increase of membership from 2,304 to 4,987. These societies worked satisfactorily and were successful in achieving their object of encouraging thrift and creating an atmosphere of mutual service among the members.

17. The Government of Bengal have great pleasure in acknowledging the assistance rendered to the movement by the various District and Subdivisional Officers mentioned by the Registrar and by all non-official gentlemen connected with the movement. The thanks of Government are due to Rai J. M. Mitra Bahadur for the way in which he discharged his duties.

By order of the Governor in Council,

G. P. HOGG,

Secretary to the Government of Bengal.
